### A. Existing Conditions

#### 1. Site Setting and Ecological Communities in the Vicinity of the Project Site

The Crossroads 312 LLC property (the Site) is an approximately 52-acre, elongated triangular-shaped property that is bound to the west by Route 312, to the east by a railroad line and to the south by Interstate 84. A lot with a single family residence is located to the north of the Site. The land use within the vicinity (0.5 miles) of the Site ranges from undeveloped wetlands and uplands to large commercial development. The land use north of the Site consists of a combination of residential and small scale commercial development along Route 312 as well as large scale commercial development within the Terravest complex. Areas north of the Site also include undeveloped mixed deciduous forest and wetlands along the west side of Route 312, north of the Terravest complex. The land use to the east of the Site includes the large New York State Department of Environmental Conservation (DEC) freshwater wetland BR-18 that is associated with Tonetta Brook. Undeveloped mixed deciduous forest surrounds the east and west sides of this wetland complex. A portion of the land to the east of the Site is part of a Town park. Tonetta Lake and some residential development are located between 0.4 miles to 0.5 miles to the east of the Site. The land use south of the Site includes developed uses such as Interstate 84, the Metro North rail line and parking area in the station and commercial plaza that includes the Home Depot. Undeveloped land uses south of the Site include mixed deciduous forest and a wetland complex with a stream that drains from the Tonetta Lake, see Map #18. Lands to the west of the Site include commercial development along the south side of Route 312, a large wetlands complex north of Route 312 and areas of mixed deciduous forest.

#### 2. On-Site Ecological Community Classification and Mapping

The ecological communities on the Site were classified in accordance with *Ecological Communities of New York State*, (Draft second edition, New York Natural Heritage Program, January 2002). Field investigations to characterize the habitats and to inventory plant and animal species found on the Site were conducted by Evans Associates Environmental Consulting, Inc. (Evans Associates) on August 21, 2008; July 30, 2009; August 6, 2009; December 2, 2009; April 14, 2010; April 1, 2013; June 4, 17 and 20, 2013; and July 16, 2013. The results of these field investigations are summarized in Appendix H, ***Biological Assessment Report for the Crossroads 312 LLC Report***, prepared by Evans Associates and dated August, 2013. Species of plants that were documented on the Site during the field investigations are listed in

### A. Existing Conditions

#### 1. Site Setting and Ecological Communities in the Vicinity of the Project Site

The Crossroads 312 LLC property (the Site) is an approximately 52-acre, elongated triangular-shaped property that is bound to the west by Route 312, to the east by a railroad line and to the south by Interstate 84. A lot with a single family residence is located to the north of the Site. The land use within the vicinity (0.5 miles) of the Site ranges from undeveloped wetlands and uplands to large commercial development. The land use north of the Site consists of a combination of residential and small scale commercial development along Route 312 as well as large scale commercial development within the Terravest complex. Areas north of the Site also include undeveloped mixed deciduous forest and wetlands along the west side of Route 312, north of the Terravest complex. The land use to the east of the Site includes the large New York State Department of Environmental Conservation (DEC) freshwater wetland BR-18 that is associated with Tonetta Brook. Undeveloped mixed deciduous forest surrounds the east and west sides of this wetland complex. A portion of the land to the east of the Site is part of a Town park. Tonetta Lake and some residential development are located between 0.4 miles to 0.5 miles to the east of the Site. The land use south of the Site includes developed uses such as Interstate 84, the Metro North rail line and parking area in the station and commercial plaza that includes the Home Depot. Undeveloped land uses south of the Site include mixed deciduous forest and a wetland complex with a stream that drains from the Tonetta Lake, see Map #18. Lands to the west of the Site include commercial development along the south side of Route 312, a large wetlands complex north of Route 312 and areas of mixed deciduous forest.

#### 2. On-Site Ecological Community Classification and Mapping

The ecological communities on the Site were classified in accordance with *Ecological Communities of New York State*, (Draft second edition, New York Natural Heritage Program, January 2002). Field investigations to characterize the habitats and to inventory plant and animal species found on the Site were conducted by Evans Associates Environmental Consulting, Inc. (Evans Associates) on August 21, 2008; July 30, 2009; August 6, 2009; December 2, 2009; April 14, 2010; April 1, 2013; June 4, 17 and 20, 2013; and July 16, 2013. The results of these field investigations are summarized in Appendix H, ***Biological Assessment Report for the Crossroads 312 LLC Report***, prepared by Evans Associates and dated August, 2013. Field investigations to characterize the habitats and to inventory plant and animal species found on the Site were conducted by Evans Associates Environmental Consulting, Inc. (Evans Associates) on August 21, 2008; July 30, 2009; August 6, 2009; December 2, 2009; April 14, 2010; April 1, 2013; June 4, 17 and 20, 2013; and July 16, 2013. The results of these field investigations are summarized in Appendix H, ***Biological Assessment Report for the Crossroads 312 LLC Report***, prepared by Evans Associates and dated August, 2013. Species of plants that were documented on the Site during the field investigations are listed in

### A. Existing Conditions

#### 1. Site Setting and Ecological Communities in the Vicinity of the Project Site

The Crossroads 312 LLC property (the Site) is an approximately 52-acre, elongated triangular-shaped property that is bound to the west by Route 312, to the east by a railroad line and to the south by Interstate 84. A lot with a single family residence is located to the north of the Site. The land use within the vicinity (0.5 miles) of the Site ranges from undeveloped wetlands and uplands to large commercial development. The land use north of the Site consists of a combination of residential and small scale commercial development along Route 312 as well as large scale commercial development within the Terravest complex. Areas north of the Site also include undeveloped mixed deciduous forest and wetlands along the west side of Route 312, north of the Terravest complex. The land use to the east of the Site includes the large New York State Department of Environmental Conservation (DEC) freshwater wetland BR-18 that is associated with Tonetta Brook. Undeveloped mixed deciduous forest surrounds the east and west sides of this wetland complex. A portion of the land to the east of the Site is part of a Town park. Tonetta Lake and some residential development are located between 0.4 miles to 0.5 miles to the east of the Site. The land use south of the Site includes developed uses such as Interstate 84, the Metro North rail line and parking area in the station and commercial plaza that includes the Home Depot. Undeveloped land uses south of the Site include mixed deciduous forest and a wetland complex with a stream that drains from the Tonetta Lake, see Map #18. Lands to the west of the Site include commercial development along the south side of Route 312, a large wetlands complex north of Route 312 and areas of mixed deciduous forest.

#### 2. On-Site Ecological Community Classification and Mapping

The ecological communities on the Site were classified in accordance with *Ecological Communities of New York State*, (Draft second edition, New York Natural Heritage Program, January 2002). Field investigations to characterize the habitats and to inventory plant and animal species found on the Site were conducted by Evans Associates Environmental Consulting, Inc. (Evans Associates) on August 21, 2008; July 30, 2009; August 6, 2009; December 2, 2009; April 14, 2010; April 1, 2013; June 4, 17 and 20, 2013; and July 16, 2013.
